Preparing the Siren

Loosen the locking screw located at the top of the siren and then remove the cover.

Connecting the Siren

1   From the Smart Home web portal, click or tap **My Settings > Sirens > add device**. The System Setup screen is displayed and your Smart DVR/Hub automatically goes into pairing mode.

Note: You can skip this step if the System Setup screen is already displayed (during the Smart DVR/Hub registration process, or when you are setting up other smart home accessories).

2   Slide the siren's **ON/OFF** switch to the **ON** position.

Connect Button

ON/OFF Switch

3   Press and hold the siren's **Connect** button until the status LED blinks once. When the siren has paired with your Smart DVR/Hub, the status LED blinks twice.

4   Follow the on-screen instructions to complete the setup.

Testing the Siren

Before mounting the siren at the desired location, it is important that you test the siren to ensure that it is within effective wireless range of the Smart DVR/Hub from the selected mounting position.

CAUTION
The siren is extremely loud! When testing the siren, protect your hearing by wearing earplugs, or stand at least 3 meters away from the siren.

To test the siren once it has been connected:

1.   Arm your Smart Home system in Away mode. Wait for the entry/exit delay (default is 20 seconds, unless configured differently) to be over.

2.   Trigger the siren alarm using one of these methods:
   • opening a door where an entry sensor is installed
   • walking in front of a motion sensor

3.   To turn off the siren alarm, disarm your Smart Home system by setting it to Home mode.

Mounting the Siren

Note: Please ensure the siren is tested for connectivity before permanent mounting.

Choose a central location in your home to place the siren which mounts to any flat wall surface. Before mounting the siren, make sure that the siren is switched off first by sliding the **ON/OFF** switch to **OFF** to prevent it from sounding if you inadvertently activate the tamper switch.

• Secure the siren onto the wall through the mounting holes in the four outermost corners of the siren base using appropriate wall plugs and screws for the wall surface.

• Remember to turn on the siren by sliding the **ON/OFF** switch to **ON** before replacing the siren cover.

• The siren's tamper protection function is only enabled 5 minutes after the siren is powered up. This gives you enough time to replace the cover properly without triggering the tamper alarm.

Troubleshooting

The siren is not pairing with my Smart DVR/Hub

Switch the siren off, then on again after 30 seconds. Then, try pairing the siren again.

The siren is offline

• An internet service outage may have occurred. Check to make sure that your broadband router is working properly and you are able to access the internet with your other electronic devices. Once your internet service is back up, the siren will automatically rejoin the system.

• The siren is running low on battery power. You can check the siren's battery status via the Smart Home portal. If a Low Battery symbol is shown, replace the batteries in the siren with four fresh "D" alkaline batteries immediately.
