Laser Navigation
Robotic Vacuum Cleaner

Twin-Turbine Powered

Experience extraordinary 2000Pa of suction power per turbine. Using exclusive twin-turbine technology, the X8 hybrid achieves double the clean with double the power. The force of the extra strength loosens deeply embedded hair and debris, and compresses it in the dust box for more efficient runs.

UltraPack Dust-Compression Technology

UltraPack Dust-Compression Technology increases the dust box volume utilization rate by 127%*, so more dust can be collected than ever before. This means fewer trips to empty the dustbox and more time relaxing.

*When compared with RoboVac 30C in the eufy lab

iPath™ Laser Navigation

Never miss a corner or an edge again. Intelligently set the most efficient cleaning route with laser technology. X8 hybrid quickly scans the whole house in a matter of minutes. On the next run, X8 hybrid will follow the route with precision, while avoiding obstacles along the way.

AI. Map™ Technology 2.0

Memorize multi-floor cleaning maps and more. RoboVac X8 hybrid can determine which floor it's on based on the maps it previously saved. You can also choose temporary No-Go Zones, select specific rooms to clean, and more on the app.

2-in-1 Vacuum and Mop

Memorize multi-floor cleaning maps and more. RoboVac X8 hybrid can determine which floor it's on based on the maps it previously saved. You can also choose temporary No-Go Zones, select specific rooms to clean, and more on the app.
