

Statement of Volatility - Dell PowerEdge T550

Dell PowerEdge T550 contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately upon removal of power from the component. Non-volatile components continue to retain their data even after the power has been removed from the component. Components chosen as user-definable configuration options (those not soldered to the motherboard) are not included in the Statement of Volatility. Configuration option information (pertinent to options such as microprocessors, remote access controllers, and storage controllers) is available by component separately. The following NV components are present in the PowerEdge T550 server.

Planer PCH Internal CMOS				
PCH Internal CMOS				
	Non-Volatile	1	U_PCH1	256 Bytes
RAM	N		ID45	22.145
BIOS SPI Flash	Non-Volatile	1	JP45	32 MB

Item	Type (e.g. Flash PROM, EEPROM)	Can user programs or operating system write data to it during normal operation?	Purpose? (e.g. boot code)
Planer			
PCH Internal CMOS RAM	Battery-backed CMOS RAM	No	Real-time clock and BIOS configuration settings
BIOS SPI Flash	SPI Flash	Yes	Boot code, system configuration information, UEFI environment, Flash Disceptor, ME
BIOS Data ROM SPI Flash	SPI Flash	No	4MB Data SPI ROM storage BIOS setting .
iDRAC SPI Flash	SPI Flash	No	iDRAC Uboot (boot loader), server management persistent store (i.e. iDRAC boot variables), and virtual planar FRU
вмс еммс	eMMC NAND Flash	No	Operational iDRAC FW, Lifecycle Controller (LC) USC partition, LC service diags, LC OS drivers, USC firmware, IDRAC MAC Address, and EPPID, rac log, System Event Log, lifecycle log cache
iDRAC DDR4	RAM	Yes	iDRAC RAM
System CPLD RAM	RAM	No	Not utilized
System Memory	RAM	Yes	System OS RAM
Memory VDDQ, CPU Vcore and VSA Regulators	OTP(one time programmable)	No	Operational parameters
LOM SPI FLASH	SPI Flash EEPROM	Yes	Firmware

Item	Type (e.g. Flash PROM, EEPROM)	Can user programs or operating system write data to it during normal operation?	Purpose? (e.g. boot code)
SEP internal flash	Integrated Flash+EEPROM	No	Firmware + FRU
Backplane External FRU	I2C EEPROM	No	FRU
H345/H745/H755/H755			
H345/H745/H755/H840	•		
NVSRAM	NVSRAM	No	Configuration data
FRU	EEPROM	No	Card manufacturing information
SPD	EEPROM	No	Memory configuration data
NV Flash	SPI Flash	No	Card firmware
CPLD	Flash	No	Power sequencing and Cache Offload
SPI Flash	SPI Flash	No	Holds cache data during power loss
SDRAM	SDRAM	No	Cache for HDD I/O
MCU (Cordova)	EEPROM	No	PCIe Bifurcation information to system iDRAC
BMU	Integrated Flash+EEPROM	No	Battery Management control
HBA355i fPERC			
FRU	EEPROM	No	Card manufacturing information
SPI Flash	SPI Flash	No	Card firmware
CPLD	Flash	No	Power sequencing and Cache Offload
MCU (Cordova)	EEPROM	No	PCIe Bifurcation information to system iDRAC
HBA355i/HBA355E Ada	pter PERC		
FRU	EEPROM	No	Card manufacturing information
SPI Flash	SPI FLASH	No	Card firmware
CPLD	Flash	No	Power Sequencing
FIO Base			
Microcontroller	Flash	No	Driving Health and Status LED
SPI Flash	SPI Flash	No	EasyRestore functionality contains Service Tag, Copy of SEL logs
FIO Upsell Titan	,		· •
Microcontroller	SPI Flash	No	For field maintenance. Have License, Service Tag and system

Item	Type (e.g. Flash PROM, EEPROM)	Can user programs or operating system write data to it during normal operation?	Purpose? (e.g. boot code)
			information. Driving health and status LEDs
TPM			
Trusted Platform Module (TPM)	EEPROM	Yes	Storage of encryption keys
IDSDM			
iDSDM (uSD1, uSD2)	NAND Flash	Yes	Provides mass storage
SPI Flash	SPI Flash	SPI flash is only indirectly connected to iDRAC. iDRAC can read any address in the SPI flash, but may only write the primary firmware storage area as a part of a firmware update procedure.	Boot firmware storage, configuration and state data for IDSDM.
BOSS-S2			
SPI FLASH	FLASH EEPROM	No	Boot code, FW
FRU	FLASH EEPROM	No	Card manufacturing information
LCD Bezel			
PSU			
MCU	Internal Flash	Yes	Boot code, FW
FRU	EEPROM	No	PSU information
GPU Riser			
MCU	Flash ROM	No	Riser information

Item	How is data input to this memory?	How is this memory write protected?	How is the memory cleared?
Planer			
PCH Internal CMOS RAM	BIOS	N/A – BIOS only control	1) Set NVRAM_CLR jumper to clear BIOS configuration settings at boot and reboot system. 2) Power off the system, remove coin cell battery for 30 seconds, replace battery and then power back on. 3) Restore default configuration in F2 system setup menu.
BIOS SPI Flash	SPI interface via PCH	Software write protected	Not possible with any utilities or applications and system is not functional if corrupted or removed.
BIOS Data SPI Flash	SPI interface via PCH	Software write protected	Not possible with any utilities or applications and the system is not

Item	How is data input to this memory?	How is this memory write protected?	How is the memory cleared?
	,		functional if BIOS SPI is corrupted or removed.
iDRAC SPI Flash	SPI interface via iDRAC	Embedded iDRAC subsystem firmware actively controls sub area based write protection as needed.	The user cannot clear memory completely. However, user data, lifecycle log and archive, SEL, and fw image repository can be cleared using Delete Configuration and Retire System, which can be accessed through the Lifecycle Controller interface.
BMC EMMC	NAND Flash interface via iDRAC	Embedded FW write protected	The user cannot clear memory completely. However, user data, lifecycle log and archive, SEL, and fw image repository can be cleared using Delete Configuration and Retire System, which can be accessed through the Lifecycle Controller interface.
Memory VDDQ, CPU Vcore and VSA Regulators	Once values are loaded into register space a cmd writes to nvm.	There are passwords for different sections of the register space	The user cannot clear memory.
System CPLD RAM	Not utilized	Not accessible	Not accessible
System Memory	System OS	OS Control	Reboot or power down system
Internal USB Key	USB interface via PCH. Accessed via system OS	No write protected	Can be cleared in the system OS
Trusted Platform Module (TPM, TPM 2.0 only)	Using TPM Enabled operating systems	SW write protected	F2 Setup option
SPI FLASH	The data is flash via Dell Update Package(DUP)	Reserving write protection function for HW design.	User cannot clear the memory.
8 x 2.5" SAS/SATA; 8 x 3.5" SA	S/SATA front Backplane		
SEP internal flash	I2C interface via iDRAC	Program write protect bit	The user cannot clear memory.
Backplane External FRU	Programmed at ICT during production.	No write protected	The user cannot clear memory.
H345/H745/H755/H755N fPEI H345/H745/H755/H840 Adap			
NVSRAM	ROC writes configuration data to NVSRAM	no write protected. Not visible to Host Processor	User cannot clear the memory.
FRU	Programmed at ICT during production.	no write protected	User cannot clear the memory.
SPD	Pre-programmed before assembly	no write protected. Not visible to Host Processor	User cannot clear the memory.

Item	How is data input to this memory?	How is this memory write protected?	How is the memory cleared?
Flash	Pre-programmed before	no write protected. Not	User cannot clear the
	assembly. Can be updated	visible to Host Processor	memory.
	using Dell/LSI tools		
Backup Flash	FPGA backs up DDR data	no write protected. Not	Flash can be cleared by
	to this device in case of a	visible to Host Processor	powering up the card and
	power failure		allowing the controller to flush the contents to VDs.
			If the VDs are no longer
			available, cache can be
			cleared by going into
			controller BIOS and
			selecting Discard Preserved Cache.
SDRAM	ROC writes to this memory	no write protected. Not	Cache can be cleared by
	- using it as cache for data	visible to Host Processor	powering off the card
	IO to HDDs		
HBA355i/HBA355E			
NVSRAM	ROC writes configuration	no write protected. Not	User cannot clear the
	data to NVSRAM	visible to Host Processor	memory.
FRU	Programmed at ICT during	no write protected	User cannot clear the
	production.		memory.
Flash	Pre-programmed before	no write protected. Not	User cannot clear the
	assembly. Can be updated	visible to Host Processor	memory.
	using Dell/LSI tools		
FIO Base			
Microcontroller	I2C via iDRAC	Hardware strapping	User cannot clear the memory.
SPI Flash	SPI interface from iDRAC	Embedded iDRAC	The user cannot clear
	to Right Cntl Panel	subsystem firmware	memory.
		actively controls sub area	
		based write protection as	
FIO Uncell Titors		needed.	
FIO Upsell Titan Microcontroller	SPI interface via iDRAC	Hardware stranging	User cannot clear the
Microcontroller	SPI Interface via IDRAC	Hardware strapping	memory.
